

Had it with rising fuel prices?

Here's how fleet managers can win with Natural Gas — for as low as \$1.99/gallon fixed!*

Natural gas prices are consistently lower than diesel. And Clean Energy, the nation's largest provider of natural gas for transportation, can make long-term, fixed-price fuel supply contracts to protect further against fuel price inflation.

New natural gas engines are vastly improved and the recent TIAX Report reveals that Life Cycle Costs for natural gas are better than diesel when oil prices exceed \$32 per bbl — and keep getting better after that.

The question is no longer “Why natural gas?” — but “Why not!”

To get a copy of the TIAX Report or to learn how Clean Energy can help you win, call James Harger, Senior Vice President — Marketing & Sales for Clean Energy, at (562) 546-0325. Or email jharger@cleanenergyfuels.com.

Clean Energy is the largest provider of natural gas for transportation in North America with a broad customer base in the transit, refuse, shuttle, taxi, police, interstate and intrastate trucking, airport and municipal fleet markets.

** For example, new fleet customers in September 2005 made long term contracts for fueling at existing Clean Energy locations for \$1.99 per gallon.*
