

Our neighbors know us as Yellow Cab.

But green is our middle name.

"Our neighbors love living next to our fleet of cabs."

One of those neighbors Larry Slagle is talking about is his mother — she lives in a little house, with a white picket fence, next to his fleet of cabs. Larry is the President of Yellow Cab of Greater Orange County, which was started in 1945 by his parents. "They started with two cabs. It became a family business, growing here in California, along with the rest of Orange County."

"Mom and Dad's two cabs grew into the modern fleet of alternative fuel vehicles we operate today. We see our fleet as a way to combine good corporate citizenship with good business." The Slagle's cabs run on clean, compressed natural gas (CNG), saving money over other fuels

and greatly reducing emissions. "Mom lives right there" Larry says, pointing a short distance away. "We're able to save money on fuel for our fleet and help keep the air clean for mom, our neighbors — and for our customers."

Operating a clean and efficient fleet is nothing new for the Slagles. "Dad had a propane-

powered car in the late 1950s, and we used Checker Cabs fueled with CNG in the 1970s and 1980s. It makes a difference when you run a business where you live. My eight siblings and I will continue to grow our company with Orange County's air quality as part of our business plan." The neighbors expect nothing less.
