

Our trucks burn the cleanest, greenest fuel there is.

And all of it goes to waste.

“Our trucks are clean, green, waste hauling machines.”

Proud of its progressive, green-thinking culture, Seattle ranks among the best U.S. cities for the size of its carbon footprint. Forbes magazine calls Seattle one of the country's cleanest, most environmentally committed cities.

Based in Seattle, CleanScapes is a municipal solid waste contractor that demonstrates its commitment to environmental protection in a big way. Each morning, 40 new brightly-colored CleanScapes waste collection trucks fan out across the central and north-eastern sections of the city to serve 64,000 residential and commercial customers. This CleanScapes fleet is powered

by clean-burning compressed natural gas (CNG).

To support its new CNG fleet, CleanScapes turned to Clean Energy to design, build and maintain a new time-fill station equipped with 40 state-of-the-art CNG fuel dispensers, one for each truck. CleanScapes also contracts with Clean Energy for the fleet's CNG fuel supply.

Achieving a clean, green operating profile was an important goal in the company's choice of a CNG fleet. CleanScapes President Chris Martin said, “Seattle is a

national leader in greenhouse gas emissions reduction. After careful analysis we determined that a CNG fleet would bring significant environmental benefits to the communities we serve in the city.”

Compared to diesel fuel, natural gas fuel provides significant reductions in health-harming pollutants and greenhouse gas emissions.

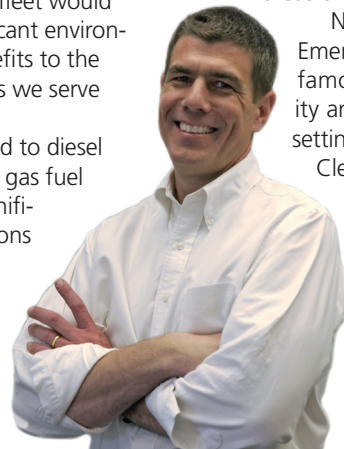

In addition to protecting environmental quality, CNG solid waste trucks are more economical to fuel and operate, quieter running than diesel trucks, and easier to maintain, Martin explained.

“The CNG trucks provide a very welcome reduction of emissions and noise levels in some of the most populated areas of Seattle,” he added.

Nicknamed The Emerald City, Seattle is famous for its air quality and pristine natural setting. The decision by

CleanScapes to deploy clean-burning CNG solid waste trucks will help keep it that way.
