Trucking: The Clean Energy Solution

**Natural gas.
It's cleaner,
greener, cheaper,
and domestic.**

What are leading fleets discovering?

Natural gas fuel is:

- Cheaper than diesel
- Produced in North America
- Fully compliant with 2010 EPA emission standards
- Lower carbon with greenhouse gas reductions of over 20% and up to 90% with biogas

Trucking Turns to Natural Gas

Trucking fleets across the country are discovering the benefits of natural gas fuel. Some fleets are motivated by fuel savings and price stability. Others support the goal of reducing our dependence on imported oil. Still more enjoy the environmental and sustainability benefits of this cleaner, abundant American resource.

Many natural gas trucks operate today in a wide variety of applications including port drayage, bulk hauling, LTL, intermodal, goods movement, and local pickup and delivery. Natural gas fueled trucks are hauling loads up to 80,000 GVW (or more depending on local weight restrictions).

With the advent of new truck engines well suited for applications like heavy-duty over-the-road trucking, natural gas trucks are now available from the leading truck manufacturers and supported by their national dealer networks.

Building America's Natural Gas Highway

Clean Energy envisions a U.S. fueling network that enables trucks to operate on natural gas in all key markets and between these markets. To make this goal a reality, Clean Energy is actively developing America's Natural Gas Highway, with LNG and CNG fueling stations at strategic locations along major interstate trucking corridors. This network will form the backbone of a national fueling infrastructure. Many of the stations will be located at Pilot-Flying J truck stops that already serve truckers across the country.

Why Clean Energy?

Fleet operators rely on us to deliver a reliable fueling solution. Clean Energy

operates or maintains more than 250 fuel stations nationally. Every day, we fuel over 400 fleets and more than 22,000 natural gas vehicles.

Fleets operators appreciate that Clean Energy satisfies their natural gas fueling needs for CNG, LNG or both. No other company can match our breadth or depth of experience. Fleets benefit from our one-stop solution for fueling. Our turnkey services include: station design and construction; station financing; operations and maintenance; station remote monitoring; grant-writing; vehicle financing; public policy development; LNG production; LNG logistics; fuel retailing and marketing; and biogas production and marketing.

Fleets can receive substantial financial support thanks to our grant-writing experts who have secured over \$250 million for vehicle purchases and infrastructure. Clean Energy can also provide capital for fueling stations, allowing fleets to deploy their capital in other ways.

Natural gas fuel costs up to \$1.50 or more per gallon less than diesel fuel, and projections call for this favorable cost difference to extend well into the future.

Fleets benefit from our years of experience, breadth of expertise, sole focus on natural gas vehicle fuel, nationwide service capability, and scalability. Contact us today to learn how you can enjoy the cheaper, cleaner, lower carbon, and domestic fuel benefits of natural gas.
