

Clean. **Green.** Powerful. McNeilus CNG.

Innovation that drives you.

Join the drive toward CNG-powered vehicles.

The future is now with McNeilus.

Given the growing concerns regarding global warming and the volatile nature of today's fuel prices, it's more important than ever that we look to sustainable and environmentally friendly energy alternatives — especially for industries that consume large amounts of fuel in their operations.

At McNeilus, we're leading the drive toward the next generation of vehicle solutions. We're helping the construction and waste management industries become more environmentally friendly and control costs with our innovative CNG technologies. Our CNG-powered concrete mixers are the first commercially manufactured mixers on the market, and we're also a national leading supplier of CNG-powered refuse trucks.

Why CNG?

CNG is a fossil fuel substitute for gasoline and diesel, and is less expensive than both when oil prices are more than \$31 per barrel.* When compared to diesel engines, McNeilus CNG-powered vehicles offer real advantages. They save on fuel costs, cut noise pollution dramatically, and run up to six times cleaner — reducing nitrogen oxide (NOx) emissions by up to 83 percent and carbon dioxide (CO2) by up to 25 percent. So, not only is CNG good for the environment, it's good for your budget.

With CNG you can refuel your fleet overnight, without the cost of an attendant — not the case with other fuels. CNG is also much safer in the unlikely event of a spill, since it is lighter than air and dissipates quickly.

Straight from our factory to your fleet.

McNeilus is currently the only manufacturer in the industry who can install CNG systems ready to work straight from the factory. Our CNG-powered vehicles are paired with reliable Allison Transmissions and fitted exclusively on-site with 6-cylinder, 8.9L Cummins ISL G engines. These engines are clean-running and reliable, and they meet EPA 2010 heavy-duty engine emissions standards.

Cash in on the incentives.

In addition to pioneering environmentally sustainable vehicle solutions through a commitment to product and technology innovation, McNeilus is also experienced in helping customers obtain state and federal grants and tax rebates — up to \$32,000 per vehicle** — for alternative-fueled vehicles and fueling stations. We have grant specialists available who can help you navigate the process of identifying and securing funding to convert your fleet to CNG.

Visit our website for a demonstration of our CNG return on investment calculator — see how much you could save by migrating your fleet to CNG!
