Clean Energy is fast becoming one of North America's leading providers of LNG fueling stations, as well as a leading supplier of LNG. Its growing list of LNG customers represent the commercial as well as transportation industries. Leveraging Clean Energy's expertise, resources and turnkey services, companies and fleets across North America are realizing the economical and environmental advantages of LNG as an alternative source of energy.

LNG for Transportation

Whether a client's need is spot LNG supply or a turnkey full-service solution, Clean Energy is ready and able to help. Its LNG services allow heavy-duty trucking fleets to accommodate long-distance and low-weight requirements, while accessing the economies and clean-burning benefits of vehicular natural gas. Clean Energy is also helping an increasing number of fleet clients transition from compressed natural gas (CNG) to LNG, allowing them to realize long-range and low-weight advantages as well.

LNG for Commercial Industries

In addition to providing LNG fueling stations, Clean Energy delivers LNG to a growing number of commercial businesses, including testing facilities, lumber mills and utility plants. Tapping into multiple sources of LNG across North America, Clean Energy meets the needs of an expanding LNG market with prompt and efficient service. Its fleet, comprised of 10,000-gallon trailers, delivers over 1.5 million gallons of LNG each month to clients in Canada and the United States. Its skilled drivers ensure timely and reliable delivery, while maintaining an outstanding safety record.

LNG

Infrastructure

Clean Energy designs, builds and maintains LNG fueling stations using leading-edge technologies. Clean Energy engineers work to custom-design and build stations equipped to best service a client's fueling needs. Clean Energy will help determine the appropriate storage tank capacity, train operators for increased safety, monitor tank levels, and fulfill LNG transport requirements — all for a fixed price contract that averts the risk of price hikes. Clean Energy's turnkey solution lets clients access the cost savings and efficiencies of LNG, while remaining focused on operating their fleets at full capacity.

Texas LNG Plant

In December 2005, Clean Energy acquired an LNG plant in Willis, Texas capable of producing up to 100,000 gallons per day of LNG. The plant also has a 1-million-gallon storage tank to ensure inventory and deliveries.
