

Company backgrounder: Clean Energy Fuels Corp.

Fueled by a vision for a zero-emissions future and equipped with 27 years of experience evolving alternate fuel sources, Clean Energy Fuels Corp. (Clean Energy) is at the forefront of reducing emissions in the transportation industry through the delivery of renewable natural gas (RNG). Clean Energy pioneered RNG, a sustainable fuel derived from organic waste, as a vehicle fuel in the U.S. to reduce the output of greenhouse gases from thousands of vehicles.

Clean Energy continues to solidify its position as North America's leader in alternative fuel transportation with an extensive, growing network of over 600 stations it owns, operates or supplies RNG or conventional natural gas to. On the road to a more sustainable future and energy independence, Clean Energy boasts robust infrastructure, by investing hundreds of millions of dollars in the production of RNG and fueling stations that serves over 1,000 fleet customers operating over 50,000 vehicles on its fuels every day.

Clean Energy President and CEO Andrew Littlefair's mission to transform the current energy and climate landscape has driven Clean Energy to be the largest provider of RNG in the U.S. to date with a growing presence in Canada.

Today, as more companies look to address climate change, Clean Energy is well-established to meet the demand for low-and negative-carbon fueling solutions.
